

CleanCrete

Verifiably green concrete

Architects

CleanCrete contributes to LEED credits, delivers high performance and can replace regular concrete in nearly any project.

Developers & Builders

CleanCrete lets you fulfill your commitment to green construction without sacrificing performance or profitability.

Engineers

CleanCrete delivers high performance with the best available environmental-sensitivity. Compressive strength tests show it reaches design strengths in 28 days or less.

Contractors

CleanCrete is concrete and installs like concrete. No special equipment or handling is required so there is no additional cost, learning curve or labor required to use CleanCrete.

Ready Mixers

Participate in the rapidly growing market opportunity for a truly green concrete product by adding CleanCrete to your offerings.

A result of extensive research and development, CleanCrete is a verifiably green concrete that is made with recycled and by-product materials without sacrificing strength or durability.

- Best concrete solution for the environment
- Install and use just like regular concrete
- Field-proven in residential and commercial projects

Formerly known as EkoCrete, CleanCrete uses a patented, proprietary formula to drastically reduce the amount of portland cement used in the mix, giving CleanCrete significant embodied energy savings over typical concrete. What's more, CleanCrete is concrete and can be used just like it.

Only 10% of CleanCrete is new material, yet innovative engineering from Clean Concrete Technologies can provide greater strength than traditional concrete. It takes up to 50% less energy to produce CleanCrete than traditional concrete, which means less CO₂.

- Environmentally sensitive
Lower portland cement content means less energy used, less carbon emitted and reduced global warming potential.
Minimally processed recycled materials means resource conservation, avoided habitat deconstruction, reduced landfill waste.
- Innovative Engineering
Recycled fibers reduce shrinking and cracking.
Super-fine particles enhance strength gain and reduce wear and water penetration.

CleanCrete is available as a ready-mix or bagged product in two formulas:

CleanCrete Classic	CleanCrete Plus
Greenest, strong formula	Balanced green and strong formula
Our most green formula, CleanCrete Classic is the most environmentally-sensitive concrete available.	The best balance of green and strength, delivers performance with a reduced and sustainability.

Construction professionals are swiftly moving to building green. If you're one of them, you know that often you must sacrifice performance or profitability to build green. CleanCrete provides an alternative without sacrifice. There are many benefits in using CleanCrete for every construction professional.

Clean Concrete Technologies is a provider of innovative verifiably green concrete solutions. We are committed to conserving non-renewable resources and reducing the environmental impact of concrete manufacturing.
